

F1-M Plus

The F1-M Plus dental unit is one of the most “versatile” dental units available on the world market today. Compact and ideal for the smallest of dental surgery room sizes, the F1-M Plus features the compact Protech Knee-brake chair allowing patients to sit upright, enabling communication in the 6 o’clock position. At a single press of the Fimet chair based dual joystick foot controls or from the control buttons on both the doctor’s and assistants Instrument bridge, the chair will move to one of the 8 pre-set programs. Trendelenberg tilt chair position and quick and simple conversion to suite both left and right handed operation, provide added flexibility.
